

Originality and plagiarism policy

Editorial documents · 1.0.0 · 2026-10-13

AGM Scientific Publishing Academy | editorial@agmjurnal.uz

This electronic edition presents the journal's public policies for authors, reviewers and readers. The edition mark identifies the journal brand; no approving person's signature or approval resolution is asserted.

Attribution, text overlap, duplicate publication, and contextual evaluation of similarity.

1. Original work and attribution

Submit your own scholarly work and acknowledge the ideas, words, data, images, and methods of others. Direct quotations need clear quotation formatting and a source; paraphrases also need attribution. Translating another author's text without acknowledgement does not make it original. Authors remain responsible for accurate attribution across all language versions of a manuscript.

2. Reuse of an author's earlier work

Disclose substantial overlap with your own publications, preprints, theses, or conference material. Explain what the new manuscript adds and cite relevant earlier outputs. Legitimate reuse of limited methods wording may need contextual assessment, while presenting the same findings as a new study can mislead readers. Copyright permissions and scholarly originality are separate questions.

3. How similarity is interpreted

Text-matching information, when available, is an aid to editorial judgement. A percentage alone cannot establish plagiarism or originality: references, quotations, standard terminology, and short method descriptions may create innocent matches. There is no universal 80-percent originality threshold. The journal does not claim an integrated Turnitin or iThenticate service; any requested screening should be explained accurately.

4. Editorial examination and author response

An editor should examine the matched passages, their sources, attribution, extent, and relevance. Authors may be asked to explain overlap and submit corrected wording or permissions. Minor attribution problems and extensive appropriation require different responses. A request for clarification is not a finding of misconduct, and a rewritten passage does not necessarily resolve duplicate data or publication concerns.

5. Consequences and reporting

Unresolved material plagiarism or deceptive duplication can justify rejection. Concerns found after publication may require a linked correction, notice, or retraction under the corrections policy. Authors and readers should report the precise passages and sources rather than submit unsupported accusations. Cases involving broader research misconduct may require institutional consideration while the journal addresses the reliability of its record.

6. Applying this policy

This document sets out the editorial rules adopted for AGM Journal. Read it with the author guidelines and related handbook policies. A policy describes the responsibilities expected of participants; it does not establish membership of an external organisation, a certification, or a guarantee of acceptance. Where an individual case falls outside the examples given here, the editorial office should explain the applicable rule and record the reason for its decision.

7. Questions and accountability

Contact the editorial office at editorial@agmjurnal.uz with the article title, submission reference, the policy section, and your question. Provide supporting information without unnecessarily identifying research participants. The office should identify who can consider the matter and request clarification where necessary. Material changes to these rules should be reflected in a new document version. Keep your submission's policy version; earlier commitments should be assessed against the information originally supplied.
